PROFESSIONAL SUMMARY

Data Science undergraduate (minors in AI and Computer Science) who designed, built, and shipped production analytics systems at Saudi Aramco: an enterprise Power BI reporting suite serving 150+ leaders of a 3,100-person department, and a three-platform workforce system for the HRBP team. Combines Python predictive modeling, BI engineering, AI integration, and rapid full-stack delivery.

EDUCATION

University of Arizona | B.S. in Data Science | GPA: 3.76

Expected May 2027

Minors: Artificial Intelligence, Computer Science

Relevant Coursework: Machine Learning, Statistics, Data Wrangling, Data Visualization, Databases, Python Programming

TECHNICAL SKILLS

Programming & Tools: Python, SQL, R, JavaScript, C++, C#, Git/GitHub, Jupyter

Data Science & ML: pandas, NumPy, scikit-learn, statsmodels, regression, predictive modeling, statistical testing

BI & Analytics: Power BI, Power Query, Excel, data modeling, ETL, KPI reporting, data visualization, trend analysis

Web & APIs: JavaScript, HTML/CSS, SVG charting, SharePoint REST API, REST APIs, client-side XLSX processing

Automation & AI: UiPath, Robotic Process Automation (RPA), agentic automation, Azure OpenAI, NLP, chatbot integration

EXPERIENCE

Data Science & Digital Transformation Intern

Summer 2026

Saudi Aramco · Central Community Services Department (CCSD) Control Center

Dhahran, Saudi Arabia

- Independently ran the department's weekly executive reporting cycle within weeks of joining, then cut Power BI refresh time by ~38% (from 80 to 50 minutes) by engineering change-date incremental refresh across 100+ source spreadsheets holding hundreds of thousands of rows.
- Led a full redesign of the Decision Making Dashboard (DMD), the weekly reporting suite for 150+ leaders of a 3,100-employee department, into an 8+ page unified design system, cutting asset footprint by ~80%, returning 20 to 30 minutes to every weekly meeting, and winning approval as the new standard at a 100+ participant review with the director.
- Conceived and shipped three self-service workforce platforms (HTML/JavaScript) within weeks for the ~100-person HRBP team; cleared hosting with the ISA team and Admin Area and personally published the suite live on Aramco's intranet (Sharek).
- Engineered a complete ground-up BI engine that implements KPIs, cross-filtering, and drill-through like Power BI in pure HTML/JavaScript: trend analysis, column-structure Excel import, SharePoint REST API sync reflecting spreadsheet edits instantly, and an embedded AI chatbot, all with zero infrastructure (no server, no install, no training).
- Automated compliance escalation over 5,000+ consolidated HR records with a three-stage escalation ladder from supervisor to division manager to director via Aramco's email API, using idempotent, division-routed notifications that eliminated hours of manual cross-referencing.

PROJECTS

Moneyball in Soccer: Undervalued Player Valuation · *Python, pandas, statsmodels, scikit-learn*

- Modeled market value for 17,000+ players with a joint multiple linear regression ($R^2 = 0.985$ on held-out data, ~17% typical pricing error), cross-validated it against four position-specific models (GK/DEF/MID/FWD) on R^2 and RMSE, and identified undervalued players via residual analysis.

LLM Benchmarks vs. Real-World Success · *Python, scikit-learn, statistical machine learning*

- Merged 4,576 HuggingFace leaderboard models with LMArena human-preference Elo (69 matched) and compared 7 methods (OLS, Ridge, Lasso, PCR, PLS, GBM, radial SVM) under 10-fold CV: human preference proved partially predictable (best CV $R^2 = 0.55$, RMSE ≈ 60 Elo) while popularity was not (negative CV R^2 across all models; Lasso zeroed every predictor).

Does xG Work, and When Can We Trust It? · *Python, statistical testing, simulation*

- Tested expected-goals reliability on 900+ StatsBomb shots via binned calibration, permutation testing, and bootstrap confidence intervals, plus a Monte Carlo simulation of the shot volume needed before finishing skill separates from noise.

VINRecordHub: Vehicle History Report Platform · *Founder, Full-Stack, APIs*

- Founded and launched a vehicle-history report platform integrating third-party vehicle-data APIs, online payment processing, and automated report delivery.
